

Quarterly identity and access review

Each quarter, application owners review every active local role, administrator assignment, and vendor account. Remove access that no longer has an approved business purpose.

The review must confirm a named owner, least-privilege permission scope, approval evidence, and an expiry for temporary access. SSO provider claims do not replace AegisAI local roles.

Escalate unexplained privileged access to Security Operations. Record the reviewer, completion date, exceptions, and remediation owner in the access-review evidence.
