

Incident response playbook

For a confirmed Severity 1 security incident, page the incident commander immediately. Create a dedicated incident channel and preserve a time-stamped decision and evidence timeline.

The incident commander provides an initial stakeholder update within fifteen minutes. State verified impact, current mitigation, the next update time, and what remains unknown; do not speculate about root cause.

After recovery, preserve relevant logs, rotate exposed secrets or tokens, and schedule a blameless review with corrective actions, owners, and due dates.
